

The Formula for Success in College Math

Too many students entering college cannot enroll in college level math. Instead, these students take developmental/remedial math classes which cost money and don't count toward college graduation. What can be done?

Follow the Tech Prep Formula for Success in College Math.

- **Enroll in Aligned College Math (Algebra 2) in High School**
- **Enroll in senior level math in High School**
- **Score at or above the Math 1200 level in the Algebra test placement domain on the Compass Math Placement Test**

What if a student does not place at the Math 1200 level* (66 or above in the Algebra test placement domain) on the Compass Math Placement Test or 80% or above on the PLATO Pre-Assessments for Math 1200?

Use the free Compass Prep Math courseware available at your high school, and then take the Compass Math Placement Test. If your score is 66 or above in the Algebra test placement domain, free college math credit may be available to you. See your Tech Prep Liaison or Aligned College Math teacher for more information.

****North Coast Tech Prep students who test into the Pre-Algebra test placement domain or into the 0-35 score range in the Algebra test placement domain are NOT eligible to use Compass Prep.***
